REDUCTION OF NON-CUTTING TIME BY FAST RAPID SPEED

30° SLANTED ONE-PIECE BED

Optimal Structural Analysis

Structural analysis was applied to the design of the machine to increase the tool post body and reduce the machine's height so as to maintain the bed's dynamic rigidity even during high-speed machining.

ENHANCED VIBRATION ABSORPTION THANKS TO INCREASED GROUND AREA

Floor Space (L×W)

3,255×1,900 mm (128.1"×74.8")

GUIDEWAY

High-Speed Roller LM Guideway

Linear roller guideways are applied to reduce non-cutting time and bring high rigidity.

RIGIDITY HAS INCREASED 30% COMPARED TO THE BALL BEARING LM GUIDE

Rapid Traverse Rate
(X/Z)

30/30 m/min (1,181/1,181 ipm)

Ball Screw

Travel is stabilized by fastening both ends of the ball screw using the double anchored method. In particular, a large diameter ball screw with proper preload reinforces sturdiness and resistance to thermal displacement.

REALIZATION OF COMPLEX MACHINING THROUGH Y-AXIS & SUB-SPINDLE

COMPLEX MACHINING

Y-Axis Structure (SE2600Y/SY)

SE2600Y/SY with Y-axis added can even machine products that cannot be machined on the 2-axis turning centers. Contributes to productivity improvement with machining being performed on a single machine without a separate machining center process.

Keyway Milling	Multi-sided machining	Eccentric hole machining	X+Y axis circular interpolation	Fine Grooving	

Sub Spindle (SE2600SY)

When the main spindle cutting is completed, the sub spindle rotation is synchronized with the main spindle allowing the workpiece to be transferred to the sub spindle, and machining can begin on the back side of the workpiece.

30° SLANTED ONE-PIECE BED

By designing the machine bed at 30°, stability has been improved by reducing the height of the machine which previously used a 45° inclined Y-axis CNC turning center.

- Height of the machine with the previous 45° inclined Y-axis turning center : 2,225 mm (87.6")
- SE2600SY machine height : 1,960 mm (77.2") - 12% height reduction

HEAVY DUTY CUTTING & HIGH ACCURACY

MAIN SPINDLE

Spindle for Heavy Duty Cutting

The main spindle is designed with the same structure as that often found in larger sized machines. The combination of double cylindrical roller bearings and angular contact ball bearings leads to excellent heavy duty cutting performance. Also, machining performance is enhanced by applying **ribstar belt** to minimize noise and belt slipping problems.

The spindle is designed with a labyrinth structure to minimize possible bearing damage from coolant and to improve machining stability.

C-axis Control for All Models

The SE2600M/Y/SY (featuring a mill turret) can control the C-axis by 0.001°, and the SE2600 (featuring a turning turret) can control the C-axis by 0.03°.

Model	Chuck Size	Max. Turning Length	Max. Turning Dia.	Bar Capacity
SE2600	10 inch	671 mm (26.4")	Ø460 mm (18.1")	Ø81 mm (3.1")
SE2600M		630 mm (24.8")	Ø380 mm (15")	
SE2600Y/SY				

6 INCH SUB SPINDLE (SE2600SY)

By applying a high-performance sub-spindles with the maximum output of 7.5kW (10HP) and the maximum torque of 85N.m, powerful cutting performance can be demonstrated even in the secondary process using the sub-spindles.

SERVO TURRET

Standard Turret (SE2600)

The standard turret is applied with high performance AC servo motor, improving machining reliability. 3-piece coupling shows excellent performance in indexing. Powerful hydraulic tool clamping minimizes tool tip deviation caused by load.

70Bar High Pressure Coolant **OPTION**

Turret is designed to utilize 70bar high pressure coolant and it shows optimum performance in machining difficult-to-cut material.

MILL TURRET

BMT55 Turret (SE2600M/Y/SY)

The BMT turret secures the tool with four bolts and key on the tool mounting surface of the turret, making it possible to powerfully fix the tool, ensuring high reliability in rigidity and precision.

05 USER CONVENIENCE

Various Devices for User Friendly

HYDRAULIC NC TAILSTOCK

Hydraulic NC Tailstock with Position Control

The hydraulic NC tailstock applied to the SE2600 series enables independent transfer through a program independently of the turret movement and it simultaneously achieved "Improvement of user convenience" and "Reduction of cycle time".

Hydraulic NC Tailstock
(Std.)

- > Structure in which the tailstock moves independently from the turret (Position control : 0.1mm)
- > Stabilization of tailstock body hydraulic pressure
- > Turret moves independently while the tailstock moves to reduce machining setup time
- > Standard application (MT#4 live center application)

Programmable Quill Tailstock
(Opt.)

- > A structure that moves by fixing the tailstock to the saddle
- > After fixing the tailstock, the quill operated by hydraulic pressure advances to stabilize the material
- > High rigidity tail spindle and enhancement in thrust
- > Suitable for workpieces subject to vibration during machining and heavy machining load

HW-TMS (TAILSTOCK OPERATION)

This software is capable of manipulation and data management of tailstock operations through intuitive GUI.

HYUNDAI WIA ECO SYSTEM

MQL (Minimal Quantity Lubrication)

The goal of this system is to spray only the amount of lubricant required to prevent heat and chip build up at the cutting tool or work piece face.

Example of Turning Center Application

Example of Etc.

Oil Skimmer

An oil skimmer can increase coolant and tool life by removing tramp oil contaminants.

Mist Collector

Mist Collector reduces the amount of smoke and oil mist in the air. This helps build a safe and comfortable working environment and improve durability.

Lubrication System

By applying lubricant only when the machines axis are moving lubrication consumption is reduced by compared to standard systems.

HYUNDAI WIA ENERGY SAVING

HW-ESS (HYUNDAI WIA Energy Saving System)

HYUNDAI WIA Machine tool provides the optimum power saving function that can easily save energy with an intuitive user interface.

1. **Machine-ready power saving function** : Put all servo motors and other motors into sleep mode when no control or operation is done for a set time
2. **Work light auto-off function** : The work light is turned off automatically when no control or operation is done for a set time
3. **Chip conveyor auto power saving** : Operation/non operation time (timer) can be set to save energy
4. **Auto Power-off** : Auto power off after ending the an operation after a period of time
5. **Eco function** : Machine ready sleep mode can be activated/de-activated from the controller panel
6. **Power consumption monitor** : Real time power consumption can be monitored through the OP screen
